Les places, extrêmement limitées, sont ouvertes aux Parents de l'Ecole d'abord, puis au public.

*The Center for Research on Developmental Education and
The Bilingual Montessori School of Paris present:*

The Brain-Storming Tour: Powerful Voices for Montessori Education

Dr. Laura Flores Shaw: “Montessori for All Brain Types”

Designing optimal learning environments for all children requires an awareness of the interconnected growth of body, mind, and brain, and no educational approach offers a neurodevelopmental experience comparable to Montessori.

Dr. Shaw brings a new, compelling, and accessible framework that helps everyone understanding the unique power of Montessori pedagogy for children – with all types of brains.

Dr. Steven Hughes: “Surviving School Testing: Documenting Montessori’s Unique Outcomes”

Montessorians around the world are building a body of evidence showing the unique value of Montessori pedagogy. Working at the school, community, national, and international level, a compelling response to the spreading culture of education ‘reform’ through mandatory testing is growing.

Dr. Hughes shows how you can support Montessori in your community, country, and even join the international movement to demonstrate our strengths.
